

Faspar and Costa Levigatrici

A successful partnership for surface finishing lines

Faspar SpA is a globally recognized producer of turn-key equipment for the processing of metal coils. Established in 1966 as a press designer and manufacturer, the company is located in the Milan area of Robecco sul Naviglio, and has a 4,000 sq metre covered production area at its disposal. The company's research, project and development sectors have always been continuously expanded and, as a result, Faspar SpA has had the capability to produce complete sheet metal working lines since 1977.

The Faspar SpA headquarters and production plant in Robecco sul Naviglio, Milan

Faspar SpA, an expert in the manufacture of coil processing equipment, and Costa Levigatrici SpA, an expert in the manufacture of polishing and brushing machines, have shared their experience and core business to meet the quality and reliability required in the world of finishing. As a result of their commercial agreement, Faspar SpA and Costa Levigatrici SpA are now the right partners for surface finishing lines for products which meet the demands of the market and customers.

With its 40 years of experience, and with over 300 lines installed worldwide, Faspar SpA is a global reference supplier and a symbol for advanced knowhow and engineering skills.

It is well-regarded around the world for its quality products, and for a completely reliable customer service that continues to evol-

ve in response to customer needs.

Faspar SpA's main product range comprises:

- Slitting lines,
- Levelling and Straightening, and Cut-to-length lines (with feeder, or rotary shear or flying shear),
- Surface finishing lines,

- Feeding and Pressing/Punching lines,
- Tension/Stretch levelling lines,
- Roll forming lines, and
- Sandwich panel lines.

The lines are designed for:

- Stainless steel
- Steel
- Galvanized steel
- Pre-painted steel
- Aluminium
- Titanium
- Copper
- Brass
- Tinplate
- Special steel

Costa Levigatrici SpA is an Italian company located in Schio. It was established in 1982, and has grown to become one of the worldwide leaders in the manufacture of wide belt sanding machines. In 1989, it built its first 2,500mm wide metal polishing machine, and in 1993, the "Costa Metal" division was created.

Today, "Costa Metal", with more than 1,000 units installed, has become one of the most important firms for the manufacture of polishing, brushing, grinding and deburring machines for ferrous and non-ferrous materials.

Costa Levigatrici SpA currently employs around 200 people, and it operates

The Costa Levigatrici SpA headquarters and production plant in Schio, Vicenza, and two production plants in Sandrigo, Vicenza

Surface finishing line by Faspar and Costa Levigatrici

three production plants with a total covered area of 17,000 sq metres. At its headquarters in Schio, it has established a permanent showroom, and a testing facility, with several fully operational machines, where, with the support of its specialized technicians, customers can find, and then test, the most suitable solutions for their production requirements.

In 2006, a laboratory was established on the same site where instruments can check the results of all the tests performed electronically. As well as for the verification of tests and analysis, the laboratory is also used to test abrasive materials so that comprehensive professional advice can be given

regarding the best tools to use for any particular finishing requirement.

Costa Levigatrici SpA undertakes continuous research and development activities, in order to ensure that innovative solutions are always available for its customers.

The main product range at Costa Levigatrici SpA includes:

- Dry and Wet polishing and brushing

machines for coil processing lines and sheets,

- Dry and Wet polishing and brushing machines for flat bars and tubes,
- Grinding lines with abrasive belts for close tolerances and high grade finishes, and
- Dry and Wet Universal deburring and polishing machines for cut-to-size sheets.

The company's machines are designed for the processing of:

- Stainless steel
- Steel
- Galvanized steel
- Pre-painted steel
- Aluminium
- Titanium
- Copper
- Brass
- Tinplate
- Special steel
