

Surface finishing lines from Italy

Faspar SpA is recognised globally as a producer of turnkey coil processing equipment. Based in Robecco sul Naviglio, in the Milan area of Italy, it has a covered production area totalling 4,000 sq metres at its disposal.

The company has been manufacturing complete sheet metal processing lines since 1977, and has continuously expanded its

Faspar and Costa Levigatrici: a successful partnership

Faspar SpA, which specialises in the manufacture of coil processing equipment, and Costa Levigatrici SpA, which specialises in the manufacture of polishing and brushing machines, can offer their combined experience to meet the quality and reliability standards required in the finishing market of today. Their commercial agreement ensures that they are the right partners for surface finishing lines worldwide.

research, project and development sectors.

With over 40 years of experience and more than 300 lines installed worldwide, Faspar SpA has be-

come a reference supplier, recognised globally for its advanced know-how and engineering capabilities.

"We are well regarded around the world for our

quality products and for an extremely reliable customer service that continues to evolve in response to customer requirements."

Faspar SpA's main product range includes:

- slitting lines
- levelling, straightening, and cut-to-length lines (with feeder, or rotary shear or flying shear)
- surface finishing lines
- feeding and pressing/punching lines
- tension/stretch levelling lines
- roll forming lines
- sandwich panel lines

Faspar's lines are designed for:

- stainless steel
- carbon and alloy steel
- special steels
- galvanized steel
- pre-painted steel
- aluminium
- titanium
- copper
- brass
- tinplate

Costa Levigatrici SpA, based in Schio, Italy, was established in 1982, and has become one of the global leaders in the manufacture of wide belt sanding machines. In 1989, it built its first 2,500mm wide metal polishing machine, and established its "Costa Metal" division in 1993.

"Costa Metal" has developed into one of the most important companies for the manufacture of polishing, brushing, grinding and deburring machines for ferrous and non-ferrous metals with more than 1,000 units now installed.

Costa Levigatrici SpA employs around 200 people, operating three production plants with a total covered

area of 17,000 sq metres. It has established a permanent showroom, and a testing facility with several fully operational machines at its headquarters in Schio. Here, with the support of the company's specialised technicians, customers can find and test the most suitable solutions for their individual production requirements.

A laboratory was established on the same site in 2006, where the results of all tests performed can be checked electronically. In addition to verifying tests and for analysis, the laboratory is used for testing abrasives so that comprehensive professional advice can be provided with respect to the best tools to use for a particular finish.

Research and development is carried out continuously by Costa Levigatrici SpA to ensure that innovative solutions are always available for its customers.

The main product range at Costa Levigatrici SpA includes:

- dry and wet polishing and brushing machines for coil and sheet processing lines
- dry and wet polishing and brushing

- machines for flat bars and tubes grinding lines with abrasive belts for narrow tolerances and high grade finishes
- dry and wet universal deburring and polishing machines for cut-to-size sheets

Costa Levigatrici's machines are designed for processing:

- stainless steel
- carbon and alloy steel
- special steels
- galvanized steel
- pre-painted steel
- aluminium
- titanium
- copper
- brass
- tinplate
